

**PRODUCT CATEGORY - DRESSINGS**

# Hydrogels: Amorphous

Amorphous hydrogel dressings are formulations of water, polymers and other ingredients with no shape, designed to donate moisture to a dry wound and to maintain a moist healing environment. The high moisture content serves to rehydrate wound tissue. Indicated for partial- and full-thickness wounds, wounds with necrosis, minor burns and radiation tissue damage. Preserved products are multi-dose. Sterile, unpreserved products are single use. May require a secondary dressing cover.
