

Advanced Wound Care Course

FOR ALL HEALTH CARE PROFESSIONALS

September 10 - 11, 2022
Abu Dhabi, United Arab Emirates

Advanced Wound Care Learning Module (Hybrid) is designed for wound care clinicians and other healthcare providers who would like to improve their understanding of the proper treatment of wounds for complicated or atypical wounds especially for patients who are suffering from infections, diabetic foot problem, and pressure injuries.

This program will help you to identify the causes of delays in the wound healing process.

SMAC in collaboration with the **International Interprofessional Wound Care Group (IIWCG)** and **WUWHS** will provide evidenced-based, latest information on wound care healing and prevention to provide effective care to promote rapid healing.

Learning Objectives:

- ◆ Describe the steps involved in completing an interdisciplinary, holistic patient assessment related to wound management.
- ◆ Develop prevention and treatment strategies for various wound types.
- ◆ Describe the general principles required for basic wound care, emphasizing the wound bed preparation.
- ◆ Recognize and identify the multiple causes of delays to the wound healing process
- ◆ Discuss important components of wound assessment, dressing selection and documentation

Program Content Outline:

Topic 1 - Wound Bed Paradigm

Topic 2 - Pressure Injury Hospital Challenges

Topic 3 - Surgical wounds infections & dehiscence

Topic 4 - Dressing Selection Guideline

Topic 5 - Diabetic foot

Topic 6- Competencies

What's in it for me?
