

PRODUCT CATEGORY - DRESSINGS

Composites

Composite dressings are wound covers that combine physically distinct components into a single product to provide multiple functions such as a bacterial barrier, absorption and adhesion. Usually, they are composed of multiple layers and incorporate a semi- or non-adherent pad that covers the wound. May also include an adhesive border of non-woven fabric tape or transparent film. Composite dressings can function as either a primary or a secondary dressing on a wide variety of wounds and may be used with topical medications.
