

**PRODUCT CATEGORY - DRESSINGS**

# Medical Grade Honey

Dressings with medical grade honey (active Leptospermum or Manuka honey) are useful for acute and chronic wounds. The dressings help to prepare the wound bed and promote an optimal healing environment. Multiple mechanisms of action include reducing edema, lowering wound pH and debriding slough and eschar. Multiple versions of the dressing are available to handle differing levels of exudates. Indicated for partial- and full-thickness wounds including pressure ulcers, leg ulcers (arterial, venous and diabetic ulcers), burns, donor sites and surgical wounds.
